IDEATION PHASE

Empathize & Discover — Empathy Map Canvas

Representative user: EV market analyst / business decision-maker

Date	2 November	**Team ID**	_____
Project Name	Electric Vehicle Performance and Insights	**Maximum Marks**	As specified in original template

User context

The user needs to understand the electric vehicle market using a large dataset and wants a quick, visual way to compare sales patterns and vehicle-related indicators. The map below is an illustrative project-design tool based on the dashboard's intended audience, not a record of a completed interview.

SAYS

- “I need to compare EV sales across manufacturers and regions.”
- “I want to understand which battery types and vehicle categories are represented.”
- “I need key figures and charts in one place.”

THINKS

- Which manufacturers or regions show stronger sales in the available data?
- How do model year, category, and battery type relate to sales?
- Can I trust the comparison and understand how each metric is calculated?

DOES

- Reviews dataset columns and checks the available records.
- Filters data by Market Region and Model Year.
- Compares charts, KPI values, and vehicle performance indicators.
- Uses a dashboard and guided story to communicate observations.

FEELS

- Wants clarity when exploring a large dataset.
- May feel overwhelmed by raw rows and many fields.
- Feels more confident when metrics and comparisons are presented consistently.
- Values a dashboard that is easy to navigate and explain.

PAINS

Pains	Gains
• Large datasets can be time-consuming to interpret. • Comparing several market dimensions manually is difficult. • Important performance measures may be scattered across fields.	• A consolidated view of sales and performance indicators. • Faster comparisons through interactive filters. • Clear charts, KPI summaries, and a guided Tableau Story.

Design implication: The dashboard should be readable, consistent, interactive, and organized around the user's main questions: sales performance, market distribution, model-year trends, battery types, and vehicle performance.
