CUSTOMER JOURNEY MAP

Project Design Phase – Customer Experience Mapping

Date	2 November	**Team ID**	_____
Project Name	Electric Vehicle Performance and Insights	**Maximum Marks**	2 Marks

Purpose

Map the experience of a representative EV market analyst or business decision-maker using the Electric Vehicle Performance and Insights Tableau dashboard. The journey is based on the project workflow and is illustrative; it is not presented as findings from customer interviews.

Journey dimension	Stage 1 – Identify the need	Stage 2 – Explore the data	Stage 3 – Review insights and decide
Phase of journey	Recognise the need for a clear view of EV market performance.	Open the dashboard and explore sales and performance measures.	Compare patterns and use the findings to support analysis or discussion.
Actions *What does the customer do?*	Defines questions about EV sales, manufacturers, regions, categories and model years.	Reviews KPI values and charts; changes Market Region and Model Year filters.	Compares manufacturers, categories, battery types and performance measures; records relevant observations.
Touchpoints *What part of the service do they interact with?*	Project dataset (`ev_market_train.csv`) and the Tableau workbook.	EV Market Performance Dashboard, KPI views and six worksheets.	Dashboard filters, chart tooltips, worksheets and seven-point Tableau Story.
Customer thought *What is the customer thinking?*	“I need a consolidated view instead of checking many fields separately.”	“Which region, manufacturer or category is contributing most?”	“What patterns are useful, and what should I investigate further?”
Customer feeling *What is the customer feeling?*	May feel uncertain when information is spread across many columns.	Feels more informed when related measures are visible together; may need time to interpret charts.	Feels more confident discussing visible patterns, while remaining aware that results depend on the dataset.
Process ownership *Who is in the lead on this?*	Project analyst / dashboard developer: define the analysis scope and identify relevant fields.	Dashboard developer: prepare the workbook, build views and configure filters.	Analyst / dashboard user: interpret the displayed results and communicate observations.
Opportunities *How can we improve this stage?*	Clarify business questions and document field definitions and dataset limitations.	Add concise chart titles, clear labels, helpful tooltips and consistent filter behaviour.	Add date-aware refresh procedures, export options and deeper drill-downs if future data and scope permit.

Project touchpoints represented: four KPI views (Total EV Sales, Average EV Price, Average Driving Range and Average Customer Rating); six worksheets; Market Region and Model Year filters; and a seven-point Tableau Story.
