DATA FLOW DIAGRAM & USER STORIES

Project Design Phase-II

Date	2 November	**Team ID**	_____
Project Name	Electric Vehicle Performance and Insights	**Maximum Marks**	4 Marks

Data Flow Diagram (DFD)

The DFD below represents the actual project workflow at a high level: a CSV dataset is connected to Tableau Desktop, analysed through calculated fields and worksheets, and presented through an interactive dashboard and story. The project uses a CSV data source rather than a live database.

DFD flow: The analyst provides a CSV file as the source. Tableau connects to the file, performs aggregations and calculated-field logic, and stores the workbook views. The user interacts with the dashboard and story to inspect the resulting insights.

DFD symbol legend

Symbol / element	Meaning in this project
External entity / source	EV market CSV dataset (`ev_market_train.csv`).
Process	Tableau Desktop connection, analysis, calculations and visualisation.
Data store / output	Saved Tableau workbook containing worksheets, dashboard and story.
Data flow	EV records enter Tableau; aggregated measures and visual outputs are presented to the dashboard user.

User Stories

User stories are written for the main user roles relevant to this analytical dashboard. Priority and release are proposed project-planning values, not a committed software sprint schedule.

User Type	Functional Requirement (Epic)	Story No.	User Story / Task	Acceptance Criteria	Priority	Release
Business analyst	Market overview	US-01	As a business analyst, I want to view total EV sales, average price, average range and average customer rating so that I can understand overall market performance.	All four KPI views are visible and display the corresponding aggregate measures from the connected dataset.	High	Core release
Business analyst	Manufacturer analysis	US-02	As a business analyst, I want to compare EV sales by manufacturer so that I can identify differences in sales volume.	A manufacturer sales chart displays sales by manufacturer and supports comparison.	High	Core release
Business analyst	Regional analysis	US-03	As a business analyst, I want to explore EV sales by market region so that I can understand regional distribution.	A region treemap displays sales contribution by market region.	High	Core release

User Type	Functional Requirement (Epic)	Story No.	User Story / Task	Acceptance Criteria	Priority	Release
Business analyst	Category and year trends	US-04	As a business analyst, I want to compare sales by category and model year so that I can explore market patterns over time.	Category chart and model-year line chart display sales aggregated by the selected dimensions.	High	Core release
Product researcher	Battery and performance analysis	US-05	As a product researcher, I want to compare sales by battery type and review EV performance measures so that I can explore product-level patterns.	Battery-type packed bubbles and the EV performance worksheet are available in the dashboard/story.	Medium	Core release
Dashboard user	Interactive filtering	US-06	As a dashboard user, I want to filter the analysis by Market Region and Model Year so that I can focus on a relevant subset of the data.	Changing either filter updates the connected dashboard views as configured.	High	Core release
Dashboard user	Guided presentation	US-07	As a dashboard user, I want to move through a Tableau Story so that I can review the analysis in a logical sequence.	The story contains the six analysis views followed by the final dashboard.	Medium	Core release
