IDEATION PHASE

Define the Problem Statements

Customer problem statements for the Electric Vehicle Performance and Insights project

Date	2 November	**Team ID**	_____
Project Name	Electric Vehicle Performance and Insights	**Maximum Marks**	As specified in original template

Customer Problem Statement Template

The project is intended to help people who need to understand electric-vehicle market information but may find it difficult to compare sales, regions, vehicle categories, battery technologies, and performance measures across a large dataset.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An EV market analyst or business decision-maker	understand how EV sales vary across manufacturers, regions, categories, and model years	the information is spread across many records and is difficult to compare quickly	reviewing raw tabular data does not immediately reveal patterns or differences	uncertain about which market segments deserve closer attention.
PS-2	A prospective EV buyer or an EV product researcher	compare vehicle-related indicators such as price, driving range, energy efficiency, battery type, and customer rating	there is no single, clear view that brings these indicators together for exploration	important specifications and market information can be difficult to interpret side by side	overwhelmed and less confident when evaluating EV options.

How the project responds to these problems

The Tableau solution connects the EV market CSV dataset and organizes the information into six visualizations and four KPI views. Market Region and Model Year filters allow users to focus the dashboard on selected segments. Calculated fields add sales contribution, average sales per vehicle, and customer-rating status, while the Tableau Story presents the analysis in a guided sequence.
